MetaUnite: Digital Meetings

About

Welcome to MetaUnite, your gateway to the future of digital meetings and collaboration. We are a cutting-edge technology company, founded in 2022, with a bold mission: to make global collaboration easy and provide a user-friendly platform for remote meetings.

Summary

Capabilities: Product Strategy, Road Mapping, Market and User Research, UX/UI Design & Design System.

Technologies: Nodejs, React.JS & Flutter.

Industry: DAP

Location: India

Khusant Gupta

"Because we are serving people on a timetable we live off a calendar. If I have a time-slot for admin work, I have to get it done in that time - but even simple functions would take ages to get done - and the costs of this really started to add up."

[Project Demo](#)

[Learn More](#)

Problem

Existing video conferencing platforms are plagued by complexity, lack of personalization, and limited collaboration tools. Global connectivity barriers and inefficiencies in meetings hinder productivity and engagement.

Cause

MetaUnite's cause is to empower individuals globally by eliminating barriers in digital collaboration. We believe in personalization, innovation, and community-building through technology.

Solution

MetaUnite offers a straightforward, user-friendly interface, personalized avatars, and an immersive 3D environment. Our AI-powered system crafts dynamic meeting interactions, and upcoming features include advanced connectivity options and virtual collaboration spaces.

Features

- 1. Simplicity:** User-friendly interface for easy navigation.
- 2. Personalization:** Customize avatars and meeting spaces for a unique experience.
- 3. Innovation:** AI-powered system for immersive 3D meetings.
- 4. Connectivity:** Advanced options for seamless global collaboration.
- 5. Collaboration Tools:** Suite of tools, including chat and voice chat.
- 6. Community Initiatives:** Global collaboration programs fostering diverse connections.

The Future Looks Bright For MetaUnite

With a groundbreaking digital meeting platform that significantly reduces costs and administrative burdens, MetaUnite is paving the way for growth in an era where many similar services are grappling with challenges.

Rapid, precisely tailored software that liberates users from administrative complexities. A fresh revenue stream by extending our platform as a service to other digital collaboration seekers. Spreading our commitment to a user-centric metaverse meeting experience worldwide.

Don't Be Intimidated By Tech

Jungle Brothers came to us with a vision in mind. They felt hesitant because software was not their area of expertise. But by working with us they discovered that we make the process smooth and efficient while helping their vision grow.

CELEBSNFT: NFT Marketplace

About

Welcome to CelebsNFT, your gateway to the future of celebrity-driven digital art ownership. Established with a vision, CelebsNFT pioneers the Non-Fungible Celebrity (NFC) space, offering a unique blockchain-based proof of ownership for each intricately crafted celebrity avatar. Our global team, fueled by over 4 years of experience, is dedicated to providing a groundbreaking NFT experience.

Summary

Capabilities: Product Strategy, Road Mapping, Market and User Research, UX/UI Design & Design System.

Technologies: HTML, CSS , ReactJS, Laravel.

Industry: Infrastructure

Location: India

Problem

Existing NFT platforms often lack uniqueness, offering algorithmically generated and rendered art. Limited accessibility due to high investment requirements poses a challenge for many potential investors.

CelebsNFT transforms the NFT landscape by offering exclusive NFCs of immortal superstars. Beyond being an NFT provider, CelebsNFT creates a unique lifestyle community where dreams meet luxury, providing an unparalleled experience for our Collectors.

Cause

CelebsNFT's cause is to democratize NFT ownership, making it accessible to individuals from all financial backgrounds. We believe in creating a community where everyone can experience the luxury of owning a piece of the future.

Solution

CelebsNFT offers handcrafted NFC Art by the world's best artists, each taking 7-8 days to create. With a promise to deliver the BEST, our collection of 10,000 3D Non-Fungible Celebrities comes with real-life value, making NFTs accessible through fractional purchases.

Unique Handcrafted Art:

Each piece crafted by the world's best artists.
7-8 days of meticulous work for unparalleled quality.

Fractional Ownership:

Make NFT ownership accessible through fractional purchases.

Exclusive Benefits:

Private Island Parties for Star's Club Members.
Fixed returns on investments and surprise gift boxes for all holders.

NFC Membership Card:

Access a range of opportunities within the metaverse.

Features

Uniqueness Delivered: CelebsNFT offers exclusive, handcrafted NFCs, eliminating algorithmically generated and rendered art.

Accessible NFT Ownership: CelebsNFT allows fractional purchases, making NFT ownership accessible to individuals with varied financial capacities.

Community Building Beyond Art: CelebsNFT fosters a lifestyle community, going beyond traditional NFT platforms.

Real-Life Value: Each NFC comes with real-life value, ensuring a valuable investment for collectors.

Immersive Experience: CelebsNFT creates an immersive experience, allowing collectors to live out the lifestyle they've dreamed of.

Global Connectivity: CelebsNFT connects diverse communities globally, offering a unique NFT experience to individuals worldwide.

The Future Looks Bright For CELEBSNFT

CelebsNFT transforms the NFT landscape by offering exclusive NFCs of immortal superstars. Beyond being an NFT provider, CelebsNFT creates a unique lifestyle community where dreams meet luxury, providing an unparalleled experience for our Collectors.

HEALTHVATIKA: Healthcare ERP

About

Discover Healthvatika, your all-in-one ERP management platform, revolutionizing healthcare operations. From seamless patient records to efficient resource planning, it's the comprehensive solution your hospital needs for smooth, integrated management. Elevate your healthcare delivery with precision and simplicity, powered by Healthvatika.

Summary

Capabilities: Product Strategy, Road Mapping, Market and User Research, UX/UI Design & Design System.

Technologies: HTML, CSS , ReactJS, Laravel.

Industry: Healthcare ERP

Location: India

[Project Demo](#)

Problem

In response to the intricate challenges of modern healthcare, our project sought to develop a hospital dashboard that not only structures critical data effectively but also integrates principles of mindfulness, neuroscience, and empathy. The aim was to empower healthcare professionals with a comprehensive tool that enhances decision-making for optimal patient care.

Challenges:

Data Complexity: Managing vast amounts of healthcare data, including patient records, diagnostic information, and treatment plans.

Decision-Making Pressure: Healthcare professionals face high-pressure situations where swift and accurate decisions are crucial.

Human Element: Integrating principles of mindfulness, neuroscience, and empathy into a technical solution to support the well-being of both patients and healthcare providers.

Cause

In light of the intricate nature of contemporary healthcare, the imperative for a dashboard that consolidates crucial data points into an intuitive interface is evident. The project seeks to develop a hospital dashboard that not only efficiently organizes data but also incorporates principles of mindfulness, neuroscience, and empathy. This integration is aimed at enabling healthcare professionals to expeditiously make informed decisions for their patients, fostering a synergistic approach to healthcare management.

Solution

Our team designed the HealthMind Dashboard, a cutting-edge hospital management platform that goes beyond conventional dashboards. Here's how we addressed the challenges:

Data Synthesis:

Implemented advanced algorithms for data synthesis, ensuring relevant and critical information is presented intuitively. Customizable widgets enable healthcare professionals to tailor the dashboard to their specific needs

Mindfulness Integration:

Incorporated mindfulness principles through features promoting mental well-being. Mindful breathing exercises and relaxation prompts integrated directly into the dashboard to help alleviate stress during demanding situations.

Neuroscience Integration:

Utilized neuroscience insights to design a user interface that enhances cognitive processing and reduces cognitive load. Implemented color schemes and visual elements proven to positively impact cognitive function and decision-making.

Empathy Integration:

Integrated patient empathy modules, offering quick access to patient histories, preferences, and feedback. Real-time patient updates ensure healthcare professionals stay informed and connected with their patients on a personal level.

Features

Collaborative Care Planning

Tools for multidisciplinary teams to collaborate on treatment plans and share insights.

Smart Alerts

Customizable alerts for critical events, ensuring timely responses and interventions.

Real-Time Patient Monitoring

Continuous tracking of vital signs and updates for immediate awareness of patient status.

Garuda UAV Logs: A Digital Drone-Logbook System

About

Garuda UAV Logs is an intuitive, digital drone logbook app that helps you log your Aircraft's information quickly and conveniently.

It's an easy way to keep all your information effectively without enduring the tedious manual work associated with inefficient systems like working with Excel or manual logbooks.

For all your flights' operations, you can add the details of each Aircraft: their battery charges, operators, flight issues, maintenance logs, and more—all within a single app.

Garuda UAV Logs allow you to add, view, edit, or delete any of your Aircraft's info easily on one screen.

Project Demo 

Learn More

Get all your drone information in one location.

It has never been this easier to access all your information about your drones, operators, batteries, and maintenance within a single screen. You will save a lot of time for logging the details and accessing all the relevant information.

Log aircraft maintenance

Accurately logging drone problems during flights helps you identify the insights for maintenance without depending on memory to recall what happened during your last flights. Garuda UAV Logs will assist you in logging the issues and maintenance information for each drone.

Charge log

The charge log helps you add the battery's info, like the number, type, and the Aircraft. Once you have recorded this information, you can keep adding new battery charges with the date and time when you did so.

Operator

With Garuda UAV Logs, you can add, edit, or delete your drone operators' names, phone numbers, FAA certificate numbers, and locations with ease. That way, you can select the operator to reuse this information during logging the details of your drones or flights.

Maintenance

With each Aircraft, you can add detailed maintenance information. Select the Aircraft and the date of malfunction, then the detailed description of malfunction and enter the repair details like who made the repair, date, notes, and images about the repair.

Location: Canada

Why should you download Garuda UAV Logs?

Keeping records of all your drone flights can be a headache—but with Garuda UAV Logs—you can now log all the details of your aircraft operations faster and conveniently.

Escape the daunting repetitions and embrace automation & simplicity

Maintaining a clean slate of logs manually requires an extra effort, even for flights that lasted a couple of minutes. Thankfully, downloading the Garuda UAV Logs will help you log all your flight details with a few screen taps.

Real professionals make every minute count.

Manually filling out an Excel sheet or paperback after every drone flight is a real nuisance and takes time. Don't want to let a second slip from all your drone operations? Great. Opting for a UAV pilot drone logbook app that does more for you is the antidote!

Should I eat this: An app that impacts life.

About

Should I Eat This is an app for our new client in the healthcare industry. His team wanted to build an app to help users know what to eat and what not to eat based on their unique situations, age, weight, current health conditions, health history, etc. After some consultation, in-depth customer research, and detailed UI/UX designs, our team at Aveo Software delivered the right solution that surpassed the expectations of our new client.

Summary

Capabilities: Product Strategy, Road Mapping, Market and User Research, UX/UI Design & Design System.

Technologies: HTML, CSS, Flutter & Firebase.

Industry: Healthcare

Location: Canada

[Project Demo](#)

[Learn More](#)

The Challenge

Our client has been working in the healthcare industry for years, and they came to us with a specific problem: they wanted an app that users could depend on to know what they can eat or not to eat based on their unique situations.

The typical common questions included what a client with specific health issues, like Hypertension, should eat or shouldn't eat. How will the diet vary depending on age, weight, or other health conditions? And that's what the new app should do — help our client answer all these questions automatically for their clients.

[Learn More](#)

The Solution

During our consultation, we devised a unique solution based on what our client wanted to be solved. We proposed a barcode scan-based app allowing users to scan or search 99% of food items in stores. The scan result provides enough information about what a user should eat and what not to eat based on age, weight, current health conditions, and health history.

Currently, our client decided to start with the following diseases:

- Hypertension
- Kidney disease
- Gout

Our Client's Delight for The Deliverables

We've already delivered the app to the client, who is delighted with our deliverables. This app is now running an active beta, and our client's users find the app to be resourceful and are grateful and happy for it.

Auction Management Web App: Revolutionizing Auctions

About

We built an auction management app for the web and mobile. The purpose of this app is to manage and automate auctions for our clients. With these applications, the warehouse managers and staff can store, secure, and relinquish the auction items effortlessly. Thus, it makes the manual process easier, faster, and more portable for warehouse management.

This App represents a significant leap forward in the world of auctions, combining convenience, security, and efficiency into one robust platform. Whether you are an auction house, a warehouse manager, or an auctioneer, our app empowers you to take control of your auctions like never before.

The Challenge

Finding and locating items in a large warehouse is a tedious process that could take more time for warehouse employees. Worst, handling the process of manually scanning and uploading the details of the items is tiresome, repetitive, and boring.

Initially, our client had to generate ZIP folders, where the employees had to scan items, stick a tag number on the product, and upload these details into a CSV file. All these processes had to be done manually, no matter the number of products in the warehouse.

And with the hundreds of products placed in different parts of the warehouse, our client saw a need to build a system to manage and automate their warehouse auctions. This need would ease the burden of manual warehouse auction processes to ease the burden for the staff.

We also included a reporting feature to help managers understand critical data about the warehouse processes, a feature that users could find it tiresome to do it manually. And thus, all these automated processes create more time for the staff to focus on core activities that will grow the warehouse.

Johnny Depp

The Solution

With the new Action Management web application, most of our client's warehouse hassles get automated for easier management. The client can now find peace of mind with auction management. From item placement to user management, this system is designed to address the needs of the warehouse staff.

Managers and staffs find item placement management a great time and energy saver. Still, the items are placed in different parts of the warehouses, yet it is now easier to locate them with the web application.

Managers also do not have to hassle hard to manage users, item scans, auctions, locations, and warehouse areas. They can add and modify locations and warehouse areas, add and edit auction details, reset auction data, manage scans, and view critical warehouse reports in the admin panel.
